

# PROJECT REPORT

## BILLIONAIRES STATISTICS DATASET

### STUDY ANALYSIS

NAME : K.MANI JHANESWAR  
E-MAIL : [smartmani437@gmail.com](mailto:smartmani437@gmail.com)  
BATCH : January batch  
COURSE : DATA SCIENCE

# ABOUT :

- Billionaires are individuals with assets or a net worth of at least one billion currency units. In 2023, Forbes reported 2,640 billionaires globally, with the wealthiest being Elon Musk, followed by Bernard Arnault, Jeff Bezos, Bill Gates, and others. These billionaires often have significant influence in the global economy, politics, and philanthropy. Their wealth is typically tied to technology companies or other ventures they founded. Billionaires like Elon Musk have diversified assets including ownership stakes in companies like Tesla and SpaceX

# WHY BILLIONAIRES DATASET ?

## Overview :-

- The Forbes World's Billionaires list is a comprehensive snapshot of wealth, listing individuals with a net worth of at least \$1 billion
- In 2023, there were 2,640 billionaires globally, with Elon Musk being the wealthiest
- The global billionaire population has grown, with their collective wealth reaching nearly \$12 trillion

# *Data Sources and Analysis:*

1. Wealth-X Billionaire Census data was used to determine billionaire status based on total net worth, including assets like businesses and investments
2. The study utilized data from sources like the World Top Incomes Database and proprietary PwC databases to provide a comprehensive view of billionaire demographics and sources of wealth
3. PwC conducted a detailed study covering more than 1,300 billionaires, analyzing wealth trends from 1995 to 2014 across various regions and industries

# ***INSIGHTS FINDINGS :***

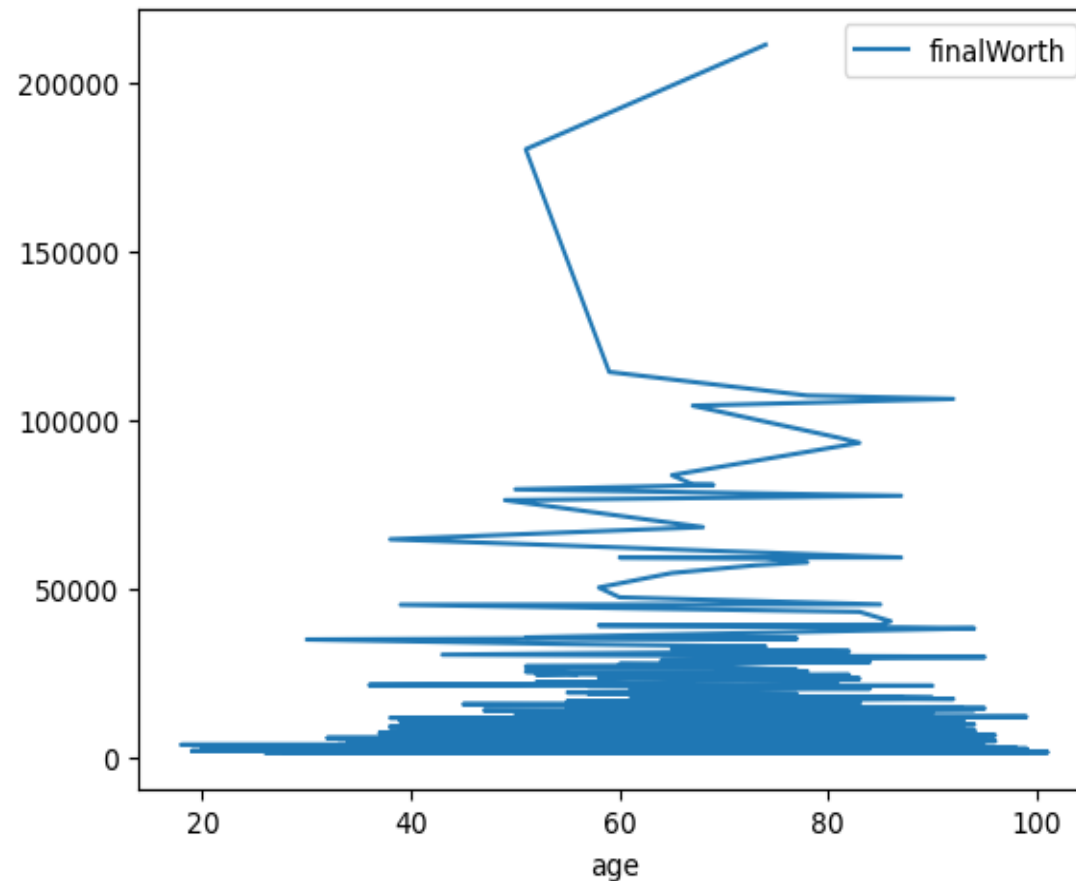

- In billionaires dataset ,we have independent and dependent variables so mainly I focuses on FIANLWORTH and AGE variables .
- Realation of age and fianlworth as shown below {from my project }

	age	FinalWorth
0	74.0	211000
1	51.0	180000
2	59.0	114000
3	78.0	107000
4	92.0	106000

	age	finalWorth
2635	51.0	1000
2636	80.0	1000
2637	60.0	1000
2638	71.0	1000
2639	66.0	1000

# ❖ LINE GRAPH BETWEEN age AND finalworth

- The given image is from my project

■ NOTE :

- ✓ The age of billionaires is evenly distributed from 18 to 99 years old, contrary to the assumption that most billionaires are older.
- ✓ The most billionaires who are older ,they have multiple sources like different industries meanwhile more wealth.....
- ✓ In my review,both sources and age are interealted to produced more wealth

NOTE :-

for detailed analysis kindly check dataset which I provided [excel].

# CONCLUSION :

1. Insights from the project delve into various aspects such as industry, country of citizenship, age, and net worth of billionaires to provide a detailed understanding.
2. Most valuable point is to be relation between the AGE and FINALWORTH of each billionaire what we have in dataset.
3. Lastly,the billionaires who are older means age between 45 to 75 has more wealth than others .
4. And the wealthy billionaires has the multiple sources as by age of above 50 and below 75

## NOTE :

Analytical view on excel as well as coding part {provided by me}
